- Recharge to 100% in as little as 30 seconds.
- Can sit unused for months and still start engines.
- Built in safeguards.
- Recharges off any running vehicle, never needs to be plugged in.

Tired of Depending On Lead Acid Batteries To Get You Started?

KrankingKART[®] Mini HD

The Mini HD is a Supercapacitor powered jump starter. Unlike ordinary battery powered jump starters the Mini HD never needs to be "plugged-in" to be recharged. Additionally the Supercapacitor never needs to be maintained, or replaced. The Mini HD redefines jump starters and sets a new standard for size, power, and dependability.

Check out this customer testimonial:

"We bought the KBI Mini HD for its state-of-the-art technology. We jump start a lot of boats, and the ability to recharge the device in 30 seconds was a huge selling point for us. The Mini HD definitely saves me time and I would recommend it to others in the industry."
